

Migrer votre messagerie IMAP vers Exchange Online

<https://www.youtube.com/@itechtime8725>

Principe

Prérequis

❖ Un plan Exchange Online

❖ Créer les identités des utilisateurs dans Microsoft 365

❖ Attribuer les licences aux utilisateurs

❖ Ajouter et vérifier le domaine de messagerie dans M365

❖ Rôles

- ❖ Exchange Administrator | Global Administrator | Organization Management
- ❖ Disposer des accès administrateurs / utilisateurs au système de messagerie IMAP source

InPrivate (2) Home - Microsoft 365 admin center + https://admin.microsoft.com/Adminportal/Home#/homepage Search msvsbenef

IMAP migration

NOTE: This option migrates the contents of user mailboxes from your source email system to Microsoft 365 or Office 365 if your source email system supports IMAP. You can migrate batches of mailboxes until all mailboxes are migrated.

This migration is supported by Exchange and other email systems.

Prerequisites for IMAP migration

Before you begin, read how to [plan for an IMAP migration](#).

To complete the IMAP migration:

- Create your users in Microsoft 365 or Office 365 before you migrate their IMAP mailboxes from the source email environment. Each user must have a target Microsoft 365 or Office 365 mailbox for the IMAP migration.
- You might need to add the domain to Microsoft 365 or Office 365 as an accepted domain before you create users in Microsoft 365 or Office 365.
[Learn more about adding a domain](#)
- Find the full name of your current email server.
[Learn more about finding the email server name](#)
- Create a migration file that contains a list of mailboxes that you want to migrate to Microsoft 365 or Office 365.

PS C:\Windows\system32> Connect-ExchangeOnline

This V3 EXO PowerShell module contains new REST API backed Exchange Online cmdlets which doesn't require WinRM for Client-Server communication. You can now run these cmdlets after turning off WinRM Basic Auth in your client machine thus making it more secure.

Unlike the EXO* prefixed cmdlets, the cmdlets in this module support full functional parity with the RPS (V1) cmdlets.

V3 cmdlets in the downloaded module are resilient to transient failures, handling retries and throttling errors inherently.

REST backed EOP and SCC cmdlets are also available in the V3 module. Similar to EXO, the cmdlets can be run without WinRM basic auth enabled.

For more information check <https://aka.ms/exov3-module>

PS C:\Windows\system32> Get-Mailbox | Set-Mailbox -MaxReceiveSize 75MB

PS C:\Windows\system32>

The screenshot shows the Exchange admin center interface. On the left, there's a navigation sidebar with options like Home, Recipients, Mail flow, Roles, Migration, Mobile, Reports, Insights, Public folders, Organization, Settings, Troubleshoot, and Other features. The main area is titled 'Manage mailboxes' and shows a list of mailboxes: Florent Chambon (florent.chambon@blablacloud.xyz) and Kate Honey (kate.honey@blablacloud.xyz). Below the list are buttons for Mailflow setting, Hide from address list, Edit, Mailbox delegation, Convert to shared mailbox, and Refresh. To the right, a modal window titled 'Message size restrictions' is open. It has two input fields: 'Sent messages maximum size(KB)' with the value 35840 and 'Received messages maximum size(KB)' with the value 76800. Below these fields is a note: 'Set the maximum sizes for sent and received messages that is between 0 and 153600 KB.' At the bottom of the modal is a 'Save' button. A green arrow points from the PowerShell command 'Get-Mailbox | Set-Mailbox -MaxReceiveSize 75MB' to the 'Received messages maximum size(KB)' input field in the dialog.

Exchange and Exchange Online Protection

Email, contacts, and scheduling are all provided by Exchange. Set up this service to enable all the functionality of Outlook and other email clients. Exchange services need 3 records to work right: an MX record tells where to deliver email messages, a TXT to prevent someone from spoofing your domain to send spam, and a CNAME record for client-side Autodiscover, helping mail clients connect users to their respective mailboxes.

Don't add these DNS records if:

- You need custom DNS routing for your email, for example, to route traffic through an external spam filtering service
- You're already using Exchange on-premises as well as Exchange Online (also called a hybrid deployment)

If this applies, you will need to clear the **Exchange and Exchange Online Protection** selection and set up your own custom DNS records to route email through Microsoft 365 later.

Important: Before adding these DNS records, make sure you've already set up blablacloud.xyz email addresses in Microsoft 365 for all existing users who still need one, or they won't be able to send and receive email.
